

What is Geoengineering Monitor?

November 6, 2014

What is Geoengineering Monitor?

Geoengineering Monitor aims to be an up-to-date source of information and critical perspectives on climate engineering. Our goal is to serve as a resource for civil society, policy-makers, journalists and the wider public in order to support advocacy work that opposes geoengineering and aims to address the root causes of climate change instead.

Our editors regularly post news and resources about the development of geoengineering technologies and their anticipated effects, as well as the projects and companies behind them, and the political and governance context they exist within. When dangerous real-world implementations of geoengineering move forward, we amplify the voices of those standing in their way and connect our readers to opportunities for collective action.

Geoengineering Monitor is a collaboration between [ETC Group](#), [Biofuelwatch](#) and the [Heinrich Boell Foundation](#).
